

Dual Roller Blind Bracket

Description

A Dual Roller Blind bracket is designed to accommodate two blinds on one bracket system.

Usually one blind with Blockout Fabric and one blind with Sunfilter fabric, the purpose of this is to give privacy at night when the Blockout Fabric is lowered and to give shade and heat control during the day when the Sunlifter fabric is lowered.

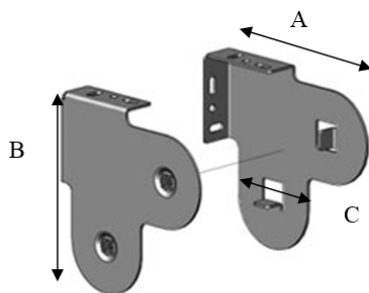

Options

A Dual Roller Blind bracket is available in three different configurations

1. Left hand Control - Both chains hanging on the left and both blinds controlled from the left
2. Right hand control - Both chains hanging on the right and both blinds controlled from the right
3. Opposite Control - One chain on the left, one chain on the right, blinds controlled one on the left and one on the right

(Note with Opposite control the front blind will sit forward and higher than the back blind)

Dimensions of Double brackets

A = 115mm
B = 100mm
C = 55mm

Installation base plate
Width = 23mm
Length = 51mm
